

## Tideflex Series 37G In-Line Check Valve

- Fits inside pipe I.D.
- Fastened with internal expansion clamp
- Custom-built to customer specifications
- Features all-elastomer, virtually maintenance-free design
- · Closes on entrapped solids

The Tideflex® Series 37G In-Line Check Valve was developed specifically for installations where clearance below the invert of a pipe is insufficient to clear the flange of the standard Series 37. The 37G effectively has a zero face-to-face dimension since it can be completely slipped into an existing pipe. Piping modifications are not required to provide space for the valve.

The Series 37G design uses the slip-on principle in reverse. A special clamp that expands outward is provided to secure the valve to the inside of a pipe, enabling the valve to be installed easily on the outlet pipe from a manhole, such as in a CSO system. The pressure drop (head loss) of the Series 37G is higher than the Series TF-1, TF-2, 35, 35-1, 39 and 39F because the 37G has a reduced discharge cross-sectional area. The 37G's bill is shaped like a wedge to allow it to be installed inside of a pipe. The pressure drop (head loss) is increased because the 37G creates greater flow restriction than the Series TF-1, TF-2, 35, 35-1, 39 and 39F.

Red Valve recommends pinning the Series 37G to the pipe. Each clamp has four pre-drilled holes to allow installation of anchors/bolts. Contact Red Valve for additional information.

## **Materials of Construction**

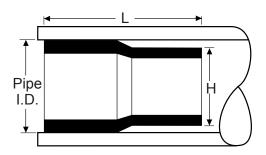

• Elastomers: Natural Rubber (NR), Ethylene Propylene Diene Terpolymer (EPDM)\*, Acrylonitrile-Butadiene (NBR), Fluoroelastomer (FKM), Chloroprene (CR), Chlorosulfonated Polyethylene (CSM), Chloro-Isobutylene-Isoprene (CIIR), NSF/ANSI/CAN 61 and NSF/ANSI/CAN 372 certified EPDM

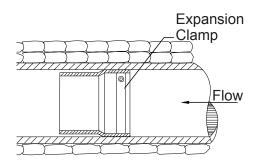

• Expansion Clamps: 316 Stainless Steel
