

Tideflex Series 37 In-Line Flanged Check Valve

- Installs between pipe flanges, eliminating valve body
- Minimal face-to-face dimension, only thickness of flange
- Virtually maintenance-free, one-piece elastomer design
- Eliminates chatter, silent, non-slamming

Materials of Construction

 Elastomers: Natural Rubber (NR), Ethylene Propylene Diene Terpolymer (EPDM)*, Acrylonitrile-Butadiene (NBR), Fluoroelastomer (FKM), Chloroprene (CR), Chlorosulfonated Polyethylene (CSM), Chloro-Isobutylene-Isoprene (CIIR), NSF/ANSI/CAN 61 and NSF/ANSI/CAN 372 certified EPDM

DIMENSIONS in/mn

 Drilled Flanges: ASME Class 125 Flanges, DIN PN6, PN10, PN16

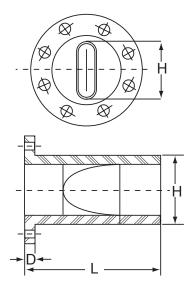

Series 37

The Tideflex® Series 37 In-Line Flanged Check Valve is a simple, reliable and cost-effective solution to backflow problems. Designed to be installed between two mating flanges, the Series 37 eliminates the need for a valve body. There is only one moving part, making the elastomer check valve virtually maintenance-free. Sliding, rotating, swinging and spring parts are eliminated. There are no seats to corrode or packing to maintain. In addition, the Series 37 is a passive design, requiring no external source of air or electricity to operate, resulting in reduced operating costs.

The Series 37 In-Line Flanged Check Valve can be ordered in a variety of elastomers. Flanges conform to ASME B16.1 Class 125 specifications. Special custom designs or metric flanged models are also available. Specify line pressure and backpressure on order.

The pressure drop (head loss) of the Series 37 is higher than the Series TF-1, TF-2, 35, 35-1, 39 and 39F because the 37 has a reduced discharge cross-sectional area. The 37's bill is shaped like a wedge to allow it to be installed inside of a pipe. The pressure drop (head loss) is increased because the 37 creates greater flow restriction than the Series TF-1, TF-2, 35, 35-1, 39 and 39F.
