

Series 9000 High Pressure Manual Pinch Valve

- High pressure pinch valve design.
- Heavy-duty sleeve is the only wetted part.
- · Extended service life.
- · Sealed body design.
- Full pressure rated body.

Materials of Construction

• Body: Ductile iron.

SERIES 9000 MANUAL

 Sleeves: Pure Gum Rubber (PGR), Ethylene Propylene Diene Terpolymer (EPDM)*, Acrylonitrile-Butadiene (NBR), Fluoroelastomer (FKM)*, Chloroprene (CR)*, Chlorosulfonated Polyethylene (CSM), Chloro-Isobutylene-Isoprene (CIIR).

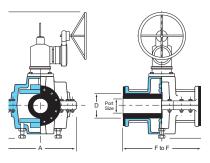

- *White food grade options available.
- Bevel Gear Operator: 4:1, 8:1, 16:1 or 22:1 actuator.

• **Flanges:** ASME B16.5 Class 300 Flanges. Optional Class 150 flanges and metric flanges available.

The Series 9000 High Pressure Manual Pinch Valve is designed with ASME Class 300 flange drilling. The heavyduty elastomer sleeves are reinforced with high strength nylon, polyester fabrics or para-aramid synthetic fiber material. Several heavy-duty sleeve designs are available. The elastomer sleeve will close even on solids. The flexing action of the sleeve eliminates the possibility of scaling. Two heavy-duty pinch bars close the sleeve. All valve working parts are isolated from the process by the sleeve. Special O-ring seals built into the flange prevents leakage at the flanges. Combining these features with a sealed body design and no packing to maintain results in a simple, rugged, no-hang-up, maintenance-free valve.

In order to accommodate the higher working pressure design, the valve is normally sized one size larger to allow for the thick double wall high pressure sleeve. As shown on the chart below, a 6" port size valve requires an 8" flange body size. Series 9000 designs are also available in ASME Class 150 designs. They are also available with pneumatic, electric or hydraulic actuators. Several bevel gear actuators are available for on/off manual operation.
