## Series 37G

- Fits inside pipe I.D.
- Fastened with internal expansion clamp.
- Features all-elastomer, maintenance-free design.
- Is custom-built to customer specifications.

Closes on entrapped solids.

## Materials of Construction

- Valves are available in pure gum rubber, neoprene, Hypalon ${ }^{\oplus}$, buna-N, Viton ${ }^{\oplus}$ and EPDM.

Stainless steel expansion clamps.

The Series 37G InLine Check Valve was developed specifically for installations where clearance below the invert of a pipe is insufficient to clear the flange of the standard Series 37. The 37G effectively has a zero face-to-face dimension since it can be completely slipped into an existing pipe. Piping modifications are not required to provide space for the valve. The Series 37 G design uses the slip-on principle in reverse.

A special clamp that expands outward is provided to secure the valve to the inside of a pipe, enabling the valve to be installed easily on the outlet pipe from a manhole, such as in a CSO system.

The pressure drop of the Series 37 G is increased because of the smaller I.D. required to fit the check valve in the line. Tideflex ${ }^{\ominus}$ Technologies recommends the valves be pinned to the pipe. Each clamp has four pre-drilled holes to allow installation of anchors/bolts.
